April 2017

To Our Valued Customer,

As part of our ongoing efforts to provide security, reliability and availability for your BD products, we test and approve Microsoft® patches that have been identified as being **Critical** or **Security** related or third party patches. Critical and Security are categories as defined by Microsoft when using the WSUS service.

Some patches are not applicable to BD products as they are intended for operating systems that are not supported by BD products; these patches will not be tested or installed (for example, Itanium-based patches).

The updates for this month do not include any updates that were found to adversely affect BD products.

This month's security patches will require a restart of servers and workstations. The patch installation and reboot schedule has been setup by your BD support personnel and will be completed this month as part of our ongoing effort to maintain the operating system security posture. Please note that if any of your system(s) are set up to not automatically install security patches (and reboot if necessary), it is your responsibility to perform these actions in order to maintain the correct security posture of the system(s). Please contact TSC to create cases if needed to reboot devices.

System security is also extended to ESET Antivirus 15268(20170417); all applicable virus definitions were tested and approved for deployment.

If you have any questions, please feel free to call 1.800.727.6102 or contact our Device Security Team @ GMB-CFN-DeviceSecurityTeam@bd.com

Sincerely

BD Security Team
